

CONTENTS

Chapter 1. Introduction	1
A. Definition of Monitoring	1
B. Resource Monitoring and Habitat Monitoring	2
C. Related Activities	2
D. Mandates for Monitoring	7
Chapter 2. Monitoring Overview	13
A. Complete Background Tasks	13
B. Develop Objectives	15
C. Design and Implement Management	16
D. Design the Monitoring Methodology	17
E. Implement Monitoring as a Pilot Study	20
F. Implement Monitoring	21
G. Report and Use Results	22
Chapter 3. Setting Priorities and Selecting Scale	25
A. Assembling Background Information	25
B. Setting Priorities	29
C. Assess Available and Needed Resources	32
D. Selecting Scale	35
E. Selecting Intensity	36
F. Priorities, Resources, Scale, Intensity	38
Chapter 4. Management Objectives	41
A. Introduction	41
B. Components of an Objective	41
C. Types and Examples of Management Objectives	46
D. Resources and Tools for Setting Objectives	49
E. Developing Management Objectives - An Example	52
F. Difficult Situations	55
G. Management Implications	56
Chapter 5. Basic Principles of Sampling	61
A. Introduction	61
B. Populations and Samples	61
C. Population Parameters vs. Sample Statistics	62
D. Accuracy vs. Precision	63
E. Sampling vs. Nonsampling errors	64
F. Sampling Distributions	66
G. Finite vs. Infinite Populations	70
H. False-Change Errors and Statistical Power Considerations	72
Chapter 6. Sampling Objectives	91
A. Introduction	91
B. Target/Threshold Management Objectives	92
C. Change/Trend Management Objectives	93
D. Setting Realistic Sampling Objectives	94

Chapter 7. Sampling Design97
A. Introduction97
B. What is the Population of Interest97
C. What is an Appropriate Sampling Unit?	101
D. What is an Appropriate Sampling Unit Size and Shape?	102
E. How Should Sampling Units Be Positioned in the Population?	113
F. Should Sampling Units Be Permanent or Temporary?	136
G. How Many Sampling Units Should be Sampled?	141
H. Computer Programs for Calculating Sample Size	153
Chapter 8. Field Techniques for Measuring Vegetation	159
A. Qualitative Techniques	159
B. Photoplots and Photopoints	161
C. Video Photography	166
D. Remote Sensing Techniques	166
E. Complete Population Counts	168
F. Density	168
G. Frequency	175
H. Cover	178
I. Production and Other Vigor Indicators	186
J. Choosing an Attribute and Technique	187
K. Locating Sampling Units in the Field	187
L. Relocating Study Areas	189
M. Monumentation	190
N. Field Equipment	192
O. New Tools	195
P. Collecting and Pressing Plants	196
Chapter 9. Data Management	209
A. Introduction	209
B. Recording Data in the Field	209
C. Entry and Storage of Data in the Office	214
Chapter 10. Communication and Monitoring Plans	221
A. Participants	221
B. Monitoring Plans	222

Chapter 11. Statistical Analysis	229
A. Using Graphs to Explore the Nature of Your Data	229
B. Parameter Estimation - Population is Sampled to Estimate a Population Mean, Proportion, or Total Population Size	233
C. Introduction to Significance Tests - Population is Sampled to Detect Changes in Some Average Value	234
D. Significance Tests to Test for the Difference Between the Means or Proportions of Two or More Independent Samples	236
E. Permanent Quadrats, Transects, and Points: the Use of Paired-Sample Significance Tests	244
F. Applying the Finite Population Correction Factor to the Results of a Significance Test	248
G. Assumptions Regarding the Statistics Discussed Above	251
H. Nonparametric Statistics	254
I. Statistical Analysis Based on Resampling	257
J. Graphing the Results of Data Analysis	257
K. Interpreting the Results of Monitoring	260
L. Statistical Software	264
Chapter 12. Demography	273
A. Introduction	273
B. Basic Concepts	274
C. Population Modeling and Viability Analysis	276
D. Field Techniques	281
E. Challenges	284
F. Demographic Monitoring and Modeling: General Cautions and Suggestions	289
G. Age/Stage Class Investigations	290
H. Demographic Structure and Changes in Demographic Structure	291
Chapter 13. Completing Monitoring and Reporting Results	299
A. Assessing Results at the End of the Pilot Period	299
B. Assessing Results After the Pilot Period	301
C. Reporting Results and Recommending Changes	302

APPENDICES

Appendix 1. Monitoring Problems	307
Appendix 2. Legislation	311
Appendix 3. Examples of Management Objectives	319
Appendix 4. Selecting Random Samples	323
Appendix 5. Tables of Critical Values for the <i>t</i> and Chi-square Distributions	331
Appendix 6. Table of Random Numbers	339
Appendix 7. Sample Size Equations	345
Appendix 8. Terms and Formulas Commonly Used in Statistics	363
Appendix 9. Sampling Design Examples and Formulas from Platts et al. 1987	373
Appendix 10. Qualitative Monitoring Examples	393
Appendix 11. Comparison of Vegetation Measures	401
Appendix 12. Field Equipment and Field Hints	405
Appendix 13. A Test of the Effects of Using Parametric Statistics on a Very Non-normal Population	407
Appendix 14. Introduction to Statistical Analysis Using Resampling Methods	411
Appendix 15. Data Forms	421
Appendix 16. Instructions on Using the Programs STPLAN and PC SIZE: CONSULTANT to Estimate Sample Sizes and Conduct Post Hoc Power Analyses	447
Appendix 17. A Procedure to Compare the Efficiency of Different Quadrat Sizes and Shapes Using Pilot Sampling	459
Appendix 18. Estimating the Sample Size Necessary to Detect Changes Between Two Time Periods in a Proportion When Using Permanent Sampling Units (Based on Data from Only the First Year)	463
Appendix 19. Instructions on Using the Program, NCSS PROBABILITY CALCULATOR, to Calculate P Values from Test Statistics that have been Corrected with the Finite Population Correction Factor	467
INDEX	471
